

How to use Manage Customized User Groups (CUGs)

What are Customized User Groups (CUGs)

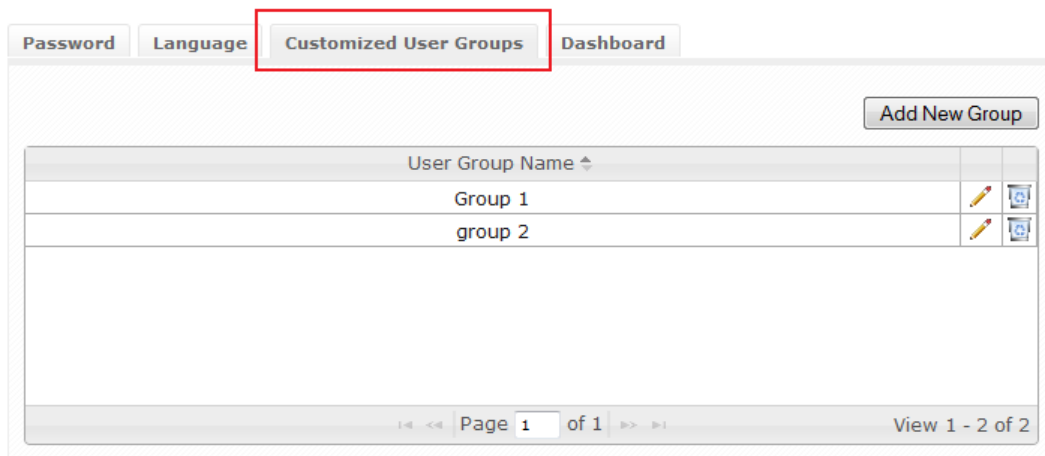

CUGs are basically user groups that you, as a user, can define and use later on. They can be used when you need to edit or set access rights in Teczo. For example, if you always create topics for the same group of people, you can create a user group so you can add this group of people quickly next time.

Create a Customized User Group

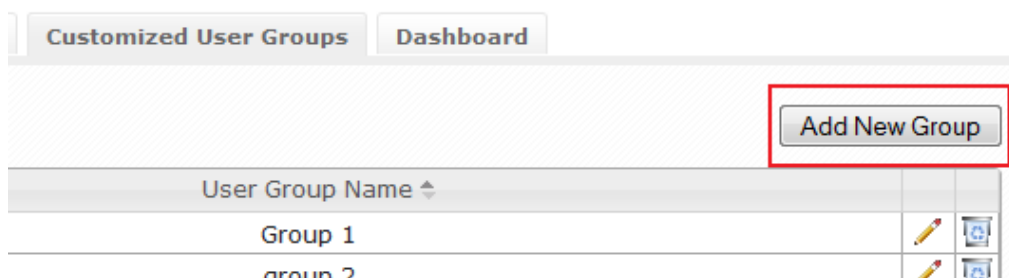

1. Click on the "My Account" Icon.

2. Go to Customized User Group tab.

3. Click Add New Group button.

4. Choose who to be in your user group by selecting from the list or searching for users by typing their names.

Step 1
Select User
